in this chapter we describe the motivation for writing this book and explain its scope some remarks on nomenclature are given in order to help the reader with a fast and easy start the concept and structure of the material compiled is p sented followed by some hints on how to make best use of it finally the status of standardization on which this book is based is described 1 1 motivation probably the main motivation for starting to draft the script for this book and eventually to finish it was the desire to have a more or less complete up to date overview of mobile network technology for myself not only when starting my work in 3gpp standardization but also continuously afterwards i realized that some of my colleagues were in search of the same and i extrapolated to the point where after 3g technology is in in the field for some time the huge new step of development would be implemented and finally exist in reality a manifold of s tem designers sw engineers solution consultants test personnel field tech cians and service staff would have to deal with the underlying architecture c cepts and detailed procedures yet i noticed in my roughly two decades of work as a engineer in a few diverse fields that compact consistent and balanced ov view material suitable for the wider audience is scarce

dealing with digitality is one of the most urgent challenges of the present the increasing importance and spread of computer technology not only challenges societies and individuals this development also puts pressure on the concept of digitality which tries to grasp the totality and peculiarity of the conditions and consequences of electronic digital computing in all its forms however precisely because digitality is commonplace so should be its critique its analysis and assessment how can an analysis do justice to both fundamental characteristics and changing concrete forms infrastructures and practices how do the developments of a digitalization that programmatically encompasses forms of networking embedding and autonomization shape media cultures and societies how do artificial intelligence and algorithmic government relate to each other how does the immateriality of the digital fit with the materiality of computers how does the changing status and scope of this technology mediate itself this book introduces ongoing debates and develops its own approach to the critique of digitality asking about forms of interfaces and processes of governance this book is a translation of the original german 1st edition kritik der digitalität by jan distelmeyer published by springer fachmedien wiesbaden gmbh part of springer nature in 2021 the

translation was done with the help of artificial intelligence machine translation by the service deepl com a subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation springer nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors
