accounting terms also contribute to the difficulties of mastering the subject in a study of accounting. It is found that the following basic reasons underlie the inherent difficulties of accounting: no systematic rules of analysis were ever developed to follow in a step by step manner to solve typically encountered problems; this results from numerous different conditions and principles involved in a problem that leads to many possible different solution methods; to prescribe a set of rules for each of the possible variations would involve an enormous number of additional steps making this task more burdensome than solving the problem directly due to the expectation of much trial and error; current textbooks normally explain a given principle in a few pages written by an accounting professional who has insight into the subject matter not shared by others; these explanations are often written in an abstract manner that causes confusion as to the principle's use and application; explanations then are often not sufficiently detailed or extensive enough to make the reader aware of the wide range of applications and different aspects of the principle being studied; the numerous possible variations of principles and their applications are usually not discussed and it is left to the reader to discover this while doing exercises; accordingly the average student is expected to rediscover that which has long been established and practiced but not always published or adequately explained; the examples typically following the explanation of a topic are too few in number and too simple to enable the student to obtain a thorough grasp of the involved principles; the explanations do not provide sufficient basis to solve problems that may be assigned for homework or given on examinations; poorly solved examples such as these can be presented in abbreviated form which leaves out much explanatory material between steps and as a result requires the reader to figure out the missing information; this leaves the reader with an impression that the problems and even the subject are hard to learn completely; the opposite of what an example is supposed to do; poor examples are often worded in a confusing or obscure way; they might not state the nature of the problem or they present a solution which appears to have no direct relation to the problem; these problems usually offer an overly general discussion never revealing how or what is to be solved; many examples do not include accompanying diagrams or graphs; denying the reader the exposure necessary for drawing good diagrams and graphs; such practice only strengthens understanding by simplifying and organizing accounting processes; students can learn the subject only by doing the exercises themselves and reviewing them in class; obtaining experience in applying the principles with their different ramifications in doing the exercises by themselves; students find that they are required to devote considerable more time to accounting than to other subjects because they are uncertain with regard to the selection and application of the theorems and principles involved; it is also often necessary for students to discover those tricks not revealed in their texts or review books that make it possible to solve problems easily; students must usually resort to methods of trial and

and error to discover these tricks therefore finding out that they may sometimes spend several hours to solve a single problem when reviewing the exercises in classrooms instructors usually request students to take turns in writing solutions on the boards and explaining them to the class students often find it difficult to explain in a manner that holds the interest of the class and enables the remaining students to follow the material written on the boards the remaining students in the class are thus too occupied with copying the material off the boards to follow the professor's explanations this book is intended to aid students in accounting overcome the difficulties described by supplying detailed illustrations of the solution methods that are usually not apparent to students solution methods are illustrated by problems that have been selected from those most often assigned for class work and given on examinations the problems are arranged in order of complexity to enable students to learn and understand a particular topic by reviewing the problems in sequence the problems are illustrated with detailed step by step explanations to save the students large amounts of time that is often needed to fill in the gaps that are usually found between steps of illustrations in textbooks or review outline books the staff of ree considers accounting a subject that is best learned by allowing students to view the methods of analysis and solution techniques this learning approach is similar to that practiced in various scientific laboratories particularly in the medical fields in using this book students may review and study the illustrated problems at their own pace students are not limited to the time such problems receive in the classroom when students want to look up a particular type of problem and solution they can readily locate it in the book by referring to the index that has been extensively prepared it is also possible to locate a particular type of problem by glancing at just the material within the boxed portions each problem is numbered and surrounded by a heavy black border for speedy identification

Accounting Problem Solver 2011-09-09 this financial accounting solutions manual provides answers to all basic and involved problems found in the textbook the financial accounting textbook covers the accounting and reporting cycle current assets long term assets debt equity and cash flows this material is typically covered in introductory accounting courses and is foundational for all accountants and business people

Accountancy 1986 leadership and learning are indispensable to each other j f kennedy in his undelivered remarks if we let ourselves we shall always be waiting for some distraction or other to end before we can really get down to our work the only people who achieve much are those who want knowledge so badly that they seek it while the conditions are still unfavourable favourable conditions never come this book presents a new learning style evident with today's students and addresses accounting industry changes as well this textbook is not written as a reference text rather it is written in another form where knowledge can be bridged and tested through questions and answers in a multiple choice format
